
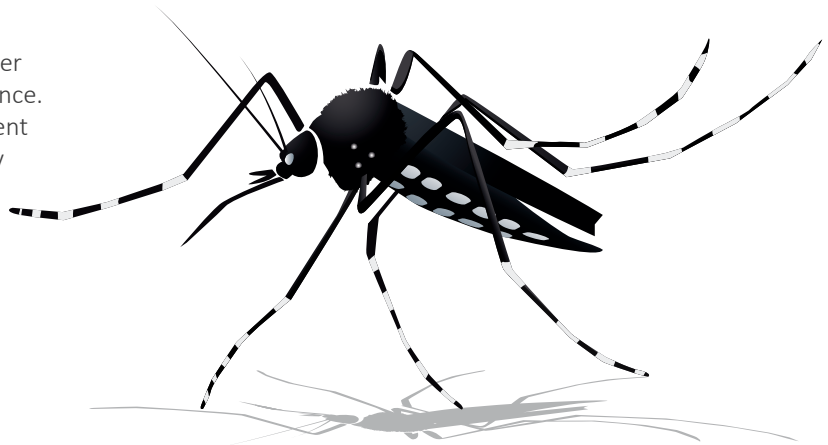
Arbovirus

At a clinical suspicion of arbovirus infection, laboratory confirmation is essential.

The samples should be obtained as soon as possible after the onset of fever to maximize the diagnostic performance. However, depending on the stage of the disease, different technical approaches of direct detection and serology are required.



Product features:

- **Wide range of products** for the detection of different types of arboviruses
- Multitest detection for the **differential diagnosis** of infections with similar symptoms, caused by the same vector
- **Monotest format** available, ideal for urgent samples
- Global approach offering **different technologies** depending on the stage of the disease:
  - **Molecular detection** (Speed-oligo® Cassette, AmpliRun® and AmpliRun® Total)
  - **Serology** (IFA, ELISA, VirClia®)
